# Introduction

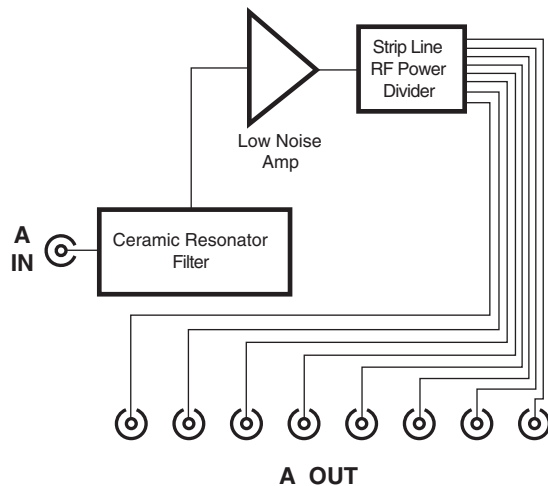

The UMC16B multi-coupler is used to distribute the signals from two antennas to eight diversity receivers to minimize the amount of cabling and antennas needed in multi-channel wireless systems. The design combines broad band ceramic filtering with low noise, high intercept point RF distribution to provide outstanding performance and flexibility. Up to eight diversity receivers or up to 16 non-diversity receivers can be utilized across a 230 MHz passband.

The UMC16B can be powered from an external supply, 12 to 18 VDC for mobile applications, or from 90 to 240 VAC for installations using the regulated power supply furnished with the unit. A locking connector on the rear panel secures the power connection.

The RF signals at the inputs first pass through a ceramic filter to block energy above and below the passband. The signal is then fed to a high current amplifier to apply the gain needed ahead of the splitter. The amplifier is a high current type with a very high IP3 (third order intercept) that minimizes intermodulation products.

The amplifier output is then distributed to the output jacks using a Wilkinson “strip line” RF splitter. Unused outputs should be terminated with 50 Ohm dummy loads for maximum performance, however, the splitter design allows unused jacks to remain un-terminated with only a slight effect on other channels (+/- 1 to 2 dB in the level at the outputs).

The unit is housed in a standard 19 inch rack mount assembly with rugged connectors.

## Antenna Power Jumpers

**NOTE:** These jumpers are **ONLY** to be used when the Lectrosonics UFM50 or UFM230 filter/amp modules are being powered from DC on the antenna input jacks on the UMC16B multicoupler.

For long cable runs between the UMC16B and remote antennas, gain must be applied at the antenna end of the coaxial cable to compensate for the loss that occurs over the length of the cable run. The Lectrosonics UFM230 or UFM50 filter/amp module can be placed in an optimum position close to the antenna and powered by DC from the UMC16B via the coaxial cable. This applies the gain before the loss in the coaxial cable run to maximize the signal to noise ratio. Jumpers at the antenna inputs on the UMC16B enable the DC power on the BNC jacks.

1. To enable the DC antenna power, unplug the power cord and place the UMC16B so that the front panel faces away from you. Remove the cover (12 screws).
2. Locate the jumpers on the circuit board (see illustration below). The power is applied to the BNC jack when the jumper is connected to both pins. To disable the power, remove it from both pins and replace it so that one end fits one of the pins and the other end of the jumper hangs freely.

## Antenna Use and Placement

Try to position the antennas so that they are not within 3 or 4 feet of large metal surfaces. It is also good to maintain a direct “line of sight” between the transmitter and the receiver antennas. In situations where the operating range is less than about 50 feet, the antenna positioning is much less critical.

A wireless transmitter sends a radio signal out in all directions. This signal will often bounce off nearby walls, ceilings, metal surfaces, etc. and a strong reflection can arrive at the receiver antenna along with the direct signal. When the direct and reflected signals are out of phase with each other a cancellation will occur as the signals mix at the antenna input, resulting in what is known as a “drop-out.”

At UHF frequencies, a drop-out usually sounds like a brief noise burst, click, pop, or something similar. In severe cases, may result in a complete loss of the carrier and the sound. A drop-out situation may be either better or worse as a crowd fills and/or leaves the room, or when the transmitter and receiver antennas are moved to different locations.

Diversity receiver designs apply various circuitry to select or combine two antennas to reduce or eliminate multipath drop-outs. The antennas must be placed at least a half wavelength apart to achieve a noticeable reduction in drop-outs, or better yet, several feet apart for the maximum benefit.

It is generally best to use two of the same type antennas on a diversity receiver, as some designs combine both antenna signals into a single receiver with a phase correction between them to maximize the resultant RF signal. If one antenna signal is significantly stronger than the other, the signal from the weaker antenna will do little to prevent multipath drop-outs that occur at the stronger antenna.

The diagram below depicts a classic multipath drop-out situation. In some diversity designs, a second antenna in a different location is selected instead of the first antenna, following the logic that a multipath drop-out is not likely to occur simultaneously at both antennas. Other designs combine the two antenna signals and control the phase of one of them to make sure they always add to each to provide a stronger signal.

## Accessory Antennas

The UMC16B will operate with any 50 ohm antenna with a BNC connector, provided the antenna is tuned to the same frequency band. Two unique models are offered by Lectrosonics to help optimize reception in any location or installation.

The SNA600 is a versatile, collapsible dipole antenna that provides a circular coverage pattern and a 100 MHz passband. The elements are tuned to frequency using a scale along the feed line. A mounting stud and bracket are included with the unit.

The ALP Series LPDA antennas are directional antennas with 4.5 dB of gain covering a broad bandwidth from 450 to 850 MHz. they

are constructed of FR4 fiberglass in a rugged assembly and are available in several models: ALP500, ALP620, and ALP650. Mounting options for all ALP Series antennas include threaded rods and adapters to fit lighting equipment, tripods, mic stands and attachment to building surfaces.

## Specifications

<b>Type:</b>	Active RF distribution system with ceramic filtering
<b>Inputs:</b>	Two 50 Ohm BNC jack on rear panel
<b>Third order intercept:</b>	+27dBm at input
<b>Outputs:</b>	
<b>Type:</b>	16 BNC jacks on rear panel. Eight jacks per antenna.
<b>Isolation:</b>	20 dB min, any output to any output Any output can be open, shorted, or terminated without affecting other outputs.
<b>Splitter type:</b>	Wilkinson 1/4 wave strip-line
<b>Filter passband:</b>	UMC16B: 537 to 767 MHz, factory set UMC16BL: 486 to 692 MHz (See serial number sticker on side panel for frequency range of your particular unit.)
<b>Input/Output RF gain:</b>	0 dB nominal
<b>In-Band Ripple:</b>	+/-2 dB
<b>Power Requirements:</b>	12 to 18 VDC; overload protection provided by internal auto resetting poly fuse
<b>Power consumption:</b>	Nominally 300 mA at 15V DC
<b>Dimensions:</b>	19 x 7 x 1.75 inches
<b>Weight:</b>	2 lbs., 9ozs.

*Specifications subject to change without notice.*

## Service and Repair

If your system malfunctions, you should attempt to correct or isolate the trouble before concluding that the equipment needs repair. Make sure you have followed the setup procedure and operating instructions. Check the inter-connecting cords.

We strongly recommend that you do not try to repair the equipment yourself and do not have the local repair shop attempt anything other than the simplest repair. If the repair is more complicated than a broken wire or loose connection, send the unit to the factory for repair and service. Don't attempt to adjust any controls inside the units. Once set at the factory, the various controls and trimmers do not drift with age or vibration and never require readjustment. There are no adjustments inside that will make a malfunctioning unit start working.

LECTROSONICS service department is equipped and staffed to quickly repair your equipment. In-warranty repairs are made at no charge in accordance with the terms of the warranty. Out of warranty repairs are charged at a modest flat rate plus parts and shipping. Since it takes almost as much time and effort to determine what is wrong as it does to make the repair, there is a charge for an exact quotation. We will be happy to quote approximate charges by phone for out of warranty repairs.

## Returning Units for Repair

You will save yourself time and trouble if you will follow the steps below:

- A. DO NOT return equipment to the factory for repair without first contacting us by letter or by phone. We need to know the nature of the problem, the model number and the serial number of the equipment. We also need a phone number where you can be reached 8 am to 4 pm (Mountain Standard Time).
- B. After receiving your request, we will issue you a return authorization number (R.A.). This number will help speed your repair through our receiving and repair departments. The return authorization number must be clearly shown on the outside of the shipping container.
- C. Pack the equipment carefully and ship to us, shipping costs prepaid. If necessary, we can provide you with the proper packing materials. UPS is usually the best way to ship the units. Heavy units should be "double-boxed" for safe transport.
- D. We also strongly recommend that you insure the equipment, since we cannot be responsible for loss of or damage to equipment that you ship. Of course, we insure the equipment when we ship it back to you.

## LIMITED ONE YEAR WARRANTY

The equipment is warranted for one year from date of purchase against defects in materials or workmanship provided it was purchased from an authorized dealer. This warranty does not cover equipment which has been abused or damaged by careless handling or shipping. This warranty does not apply to used or demonstrator equipment.

Should any defect develop, Lectrosonics, Inc. will, at our option, repair or replace any defective parts without charge for either parts or labor. If Lectrosonics, Inc. cannot correct the defect in your equipment, it will be replaced at no charge with a similar new item. Lectrosonics, Inc. will pay for the cost of returning your equipment to you.

This warranty applies only to items returned to Lectrosonics, Inc. or an authorized dealer, shipping costs prepaid, within one year from the date of purchase.

This Limited Warranty is governed by the laws of the State of New Mexico. It states the entire liability of Lectrosonics Inc. and the entire remedy of the purchaser for any breach of warranty as outlined above. NEITHER LECTROSONICS, INC. NOR ANYONE INVOLVED IN THE PRODUCTION OR DELIVERY OF THE EQUIPMENT SHALL BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, CONSEQUENTIAL, OR INCIDENTAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THIS EQUIPMENT EVEN IF LECTROSONICS, INC. HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. IN NO EVENT SHALL THE LIABILITY OF LECTROSONICS, INC. EXCEED THE PURCHASE PRICE OF ANY DEFECTIVE EQUIPMENT.

This warranty gives you specific legal rights. You may have additional legal rights which vary from state to state.
